

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

Separating the different parts of the interface into its own components.

2. What parts of encapsulating your logic were hard?

With the main logic, it was hard to see a way in where all the components could be placed while being encapsulated. I later just put it in an immediately invoked function called “setup”.

3. Is abstracting the book preview a good or bad idea? Why?

It is a good idea, because it has a lot of functionalities and a lot of bugs can come out of it, so abstracting the code could minimise the bugs.
